2 Y axes in one chart  
(Creating a chart with 2 different scales)

Microsoft Excel 2003
You may wish to have two different measurements in one chart in order to compare or view them at the same time.

1. Highlight the table that you wish to include into the chart > click **Chart Wizard** icon.

2. Click **Custom Types**

3. Choose 2 axes chart type such as **Line – Column on 2 Axes** > Click **Next**
4. Click Next

5. Fill in relevant titles such as Chart title in the Titles tab. > Click Finish

6. Chart is completed.

**Primary Y axis** is for the Rainfall in this example, appeared as a bar graph.

**Secondary Y axis** is for the Temperature in this example, appeared as a line graph.
