

# Starting the page number greater than 1

## Microsoft Word

1. **Insert > Page Number**
2. **Format Page Numbers...**

3. Type the page number that you wish to start. e.g.) '0'. > Click **OK** to return to your document

### Tip: Starting at page '0'?!

When you set your document with **Different first page** (see page 9), your page number starts page 2 from your second page. This is because the first page is still counted as page 1.

Set the starting page number '0'. The first page will become page 0 (not shown) and the second page will become page 1.
