

Superscript

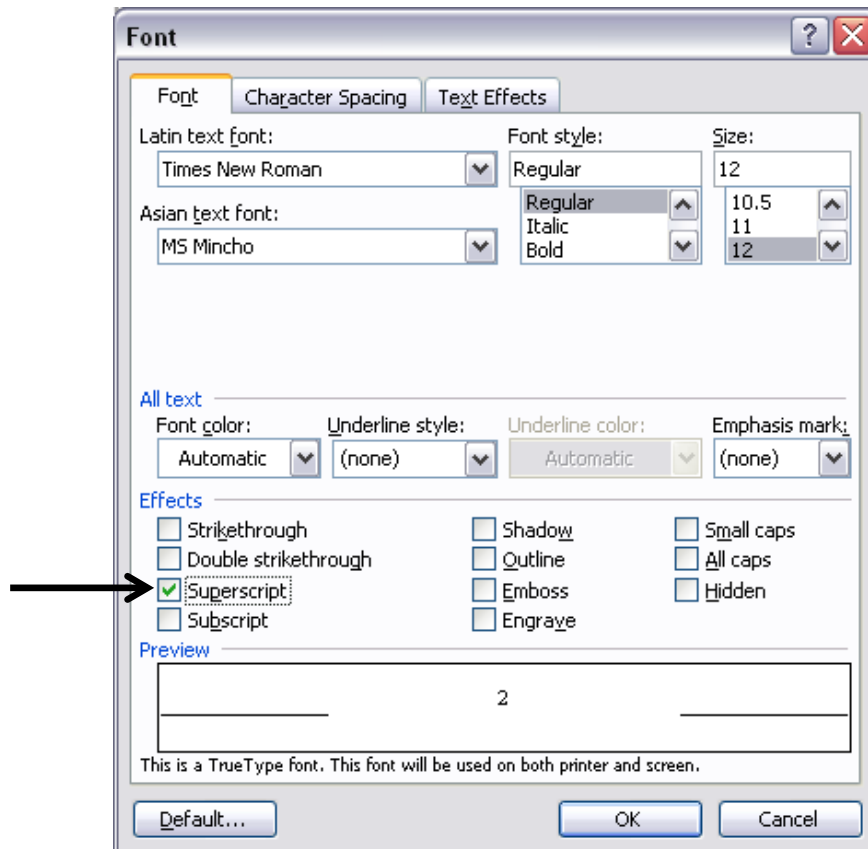

Microsoft Word 2003

You may need to create superscript characters within your writing and formulas. The superscript sits just above the current line. eg. To change this: **A² + 2ab + b²**

1. Highlight the number that you wish to adjust.
2. **Format > Font**

3. Tick the **Superscript** box under the Effects category. > Click **OK**

Tip: You can repeat the above steps for more than one superscript. Or, copy and paste one you have already created. This saves going to the menu each time.
